Reflections, Lab 1

When going through the book, lectures and lab I realised there's a lot of html tags I haven't worked with. Since I always start with a starter theme when developing websites most of the basic structure and head elements are done. My work has often been to change the structure, adding new features and proper CSS.

I chose to aim for Grade 3 in the first lab since I won't be able to aim higher in lab 2. That means for me that most tags I used are basic.

I wouldn't say I had a lot of challenges (I expect them to come in lab 2, Javascript) but a few things I will bring with me in future coding is:

- Learning about the head part of an Html-document.

- Learning shortcommands in Visual Studio Code from the lectures.

- I had no idea that I was allowed to omitt table tags like </tr>, </td> and so on. I think this made my document look a lot less cluttered.

- Use more html elements like <adress>, <aside>, <time> etc instead of <div>.

- Creating a form from scratch and understanding about key=value for example (I've used plugins when creating forms as a Wordpress webdesigner).

- Taking the time to understand the basics of flex-box.
